

Uploading Your Blogs To Your Domain

Uploading a blog to your domain is a simple task

The first thing you need to do is using cpanel on your hosting account create a database. You should have received the login information for your cpanel from your hosting provider. If you do not have this contact their support to retrieve the information.

If you do not know how to create a database you can [view a tutorial here](#)

Once completed save your database details.

The next thing to do is to upload the files to your domain. You can do this with any free ftp software such as filezilla.

[View a tutorial on Filezilla here](#)

Right click on the folder you downloaded and extract all, then open the extracted folder. There are 2 files we need to upload

This is your blog zip package and the importer.php file. Upload these 2 files.

Your blog zip package will be named similar to this and needs to be uploaded as the zipped file: -

backup-blogsforsales_com_aroma-2014_03_04-tpvzdx94bg

Once you have done this point your web browser to <http://yourdomain.com/importbuddy.php>

If you installed in a folder you would go to <http://yourdomain.com/foldername/importbuddy.php>

Follow the onscreen instructions to install your blog

Your admin login will be - <http://yourdomain.com/wp-admin>
or if you installed in a folder - <http://yourdomain.com/foldername/wp-admin>

The user name for the blog is: admin

The password is - xl24144

Please change this once you have logged in for the first time.

If you have any problems contact support at <http://norestrictionrights.com>
