

Uploading Your Blogs To Your Domain

Uploading a blog to your domain is a simple task using the duplicator plugin installed.

The first thing you need to do is using cpanel on your hosting account create a database. You should have received the login information for your cpanel from your hosting provider. If you do not have this contact their support to retrieve the information.

If you do not know how to create a database you can [view a tutorial here](#)

Once completed save your database details.

The next thing to do is to upload the files to your domain. You can do this with any free ftp software such as filezilla.

[View a tutorial on Filezilla here](#)

Right click on the folder you downloaded and extract all, then open the extracted folder. There are 2 files we need to upload

This is your blog zip package and the installer.php file. Upload these 2 files.

Once you have done this point your web browser to <http://yourdomain.com/installer.php>

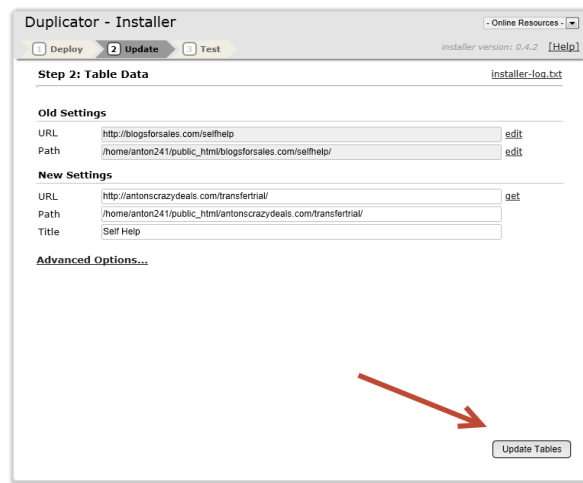

If you installed in a folder you would go to <http://yourdomain.com/foldername/installer.php>

The following import screen will now appear.

The screenshot shows the 'Duplicator - Installer' window. At the top, there are tabs for '1 Deploy', '2 Update', and '3 Test'. Below the tabs, it says 'Step 1: Files & Database'. A green status bar indicates 'System Requirements: Pass...'. Under 'MySQL Server', there are input fields for 'Host' (localhost), 'User', 'Password', and 'Database Name'. There are checkboxes for 'Database Creation' (checked) and 'Table Removal'. A 'Test Connection...' button is next to the 'Database Name' field. At the bottom, there is a 'WARNINGS & NOTICES' section with a disclaimer and a checkbox 'I have read all warnings & notices'. A 'Run Deployment' button is at the bottom right. Red arrows point to the 'Test Connection...' button, the 'I have read all warnings & notices' checkbox, and the 'Run Deployment' button.

Enter your database details and click test connection.

Once this is done agree to the warnings then click run deployment. The following screen will appear:

Click on Update Tables

Complete the final steps and you site will be up and running:

IMPORTANT FINAL STEPS!

- » **Resave Permalinks** This will update url rewrite items like the .htaccess file (requires login)
- » **Delete Installer Files** Removes installer.php, installer-data.sql, installer-log.txt & package (requires login)
- » **Test Entire Site** Validate all pages, links images and plugins
- » **View Install Report** Deploy Errors: 0 Update Errors: 0 Warnings: 0

To re-install start over at step 1.

Your admin login will be - <http://yourdomain.com/wp-admin>
or if you installed in a folder - <http://yourdomain.com/foldername/wp-admin>

The user name for the blog is: diyjobs

The password is - diyjobs

Please change this once you have logged in for the first time.

If you have any problems contact support at <http://blogsforsales.com>
