

Flashin' Order Buttons PRO v.2.2.0

USER MANUAL

"Thank You For Purchasing "Flashin' Order Buttons PRO v.2.2"

Installation

No installation needed!

Just double click on the "FlashinOrderButtonsPRO.exe" file you found in this folder to open software.

How To Use

This software is designed to be very easy to use.

All you really have to do is fill in information the way you would do when you are filling out any other form.

Step #1:

Open up the software.

Step #2:

Simply follow the instructions in the software filling in the required information as you go.

Step #3

Once, you are done, you can save the Order Button HTML code as a text file on your computer, or copy it to your clipboard.

Step #4

Follow the instructions in the text file, on how to insert the button code into any HTML file. Then upload your edited HTML page to your server and link to it. Your sales page with the order button should now be ACTIVE.

e.g. <http://www.yourdomain.com/salespage.html>

*** If you DO NOT have a server, you can copy the HTML code and paste into any free service e.g. blogger that allows HTML code.*

Important User Tips

User Tip #1: When the field asks you to enter your color choice, the color codes in the example are the same color codes as in the demo pages. You can just copy and use those as your preferred color choices.

User Tip #2: When the field asks you to enter any values, the first values listed in the example are the same values as in the demo pages. You can just copy and use those as your preferred input choices.

User Tip #3: You can change the size of your button by changing your text font size. The higher the value you enter the bigger the button will become. If you want a smaller button just enter a smaller value for the font size.

User Tip #4: As far as the flash speed is concerned. The higher the value you enter the faster the button will flash. You can slow it down by entering a lower value for your flash speed.

User Tip #5: If you do not know what colors to choose for your background and flash colors. Use the [color picker](#), it will even suggest colors for you to use that work well together.

Have fun with the software! :)
