

Using Easy Member Site Creator

Step 1:

Open up your product's sales page and download page into whatever your favorite HTML editor might be.

Insert this line of code near the top part of your sales page:

```
<div align="right"><b><a href="membersarea">Members Login</a></b></div>
```

Insert this line of code near the top of your download page:

```
<div align="right"><b><a href="logout.php">Log Out</a></b></div>
```

Save both pages.

Step 2:

Run the Easy Member Site Creator software and answer the 4 simple questions.

Note: Make sure there are no blank lines at the end of your pasted download page code. Blank lines will cause an error.

Click Create Site.

Step 3:

If you want to have a special offer presented to the customer when they login to the members area edit the specialoffer.html with whatever you want to offer them.

If you don't want a special offer open the specialoffers.txt found inside the membersarea folder with a text editor and delete the "specialoffer.html" line leaving the members.php as the first line in the file.

Step 4:

Upload the created files to your website. Note you will need to upload another copy of your product's images and any css files into the membersarea folder too. That's it; you're ready to start selling your product as a membership site!

You can use the generated "1st Email.txt" file as an email to your customers to give them an email record of their login info to the members area.

Note: There is no password recovery function since we eliminated the need for a database in v2.0 of Easy Member Site Creator. However inside the membersarea folder is a file named users.inc that contains all of the user's details if you have a customer to email you or open a support ticket asking about a forgotten password.
