

Mood King Help Page

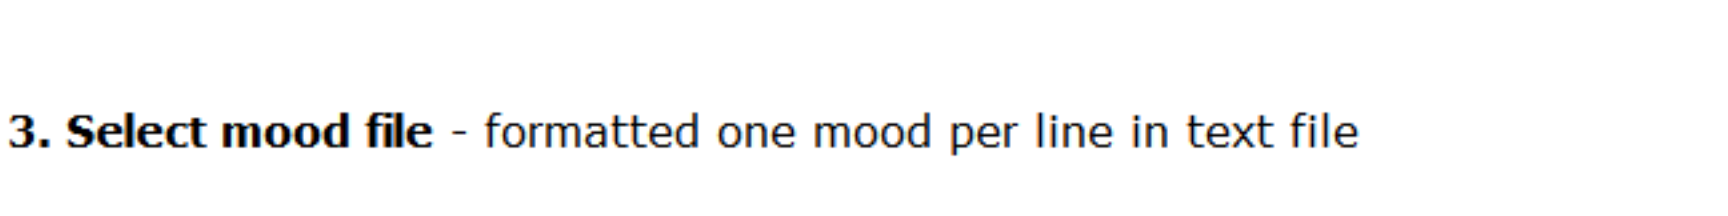

** Mood King Video Demo **

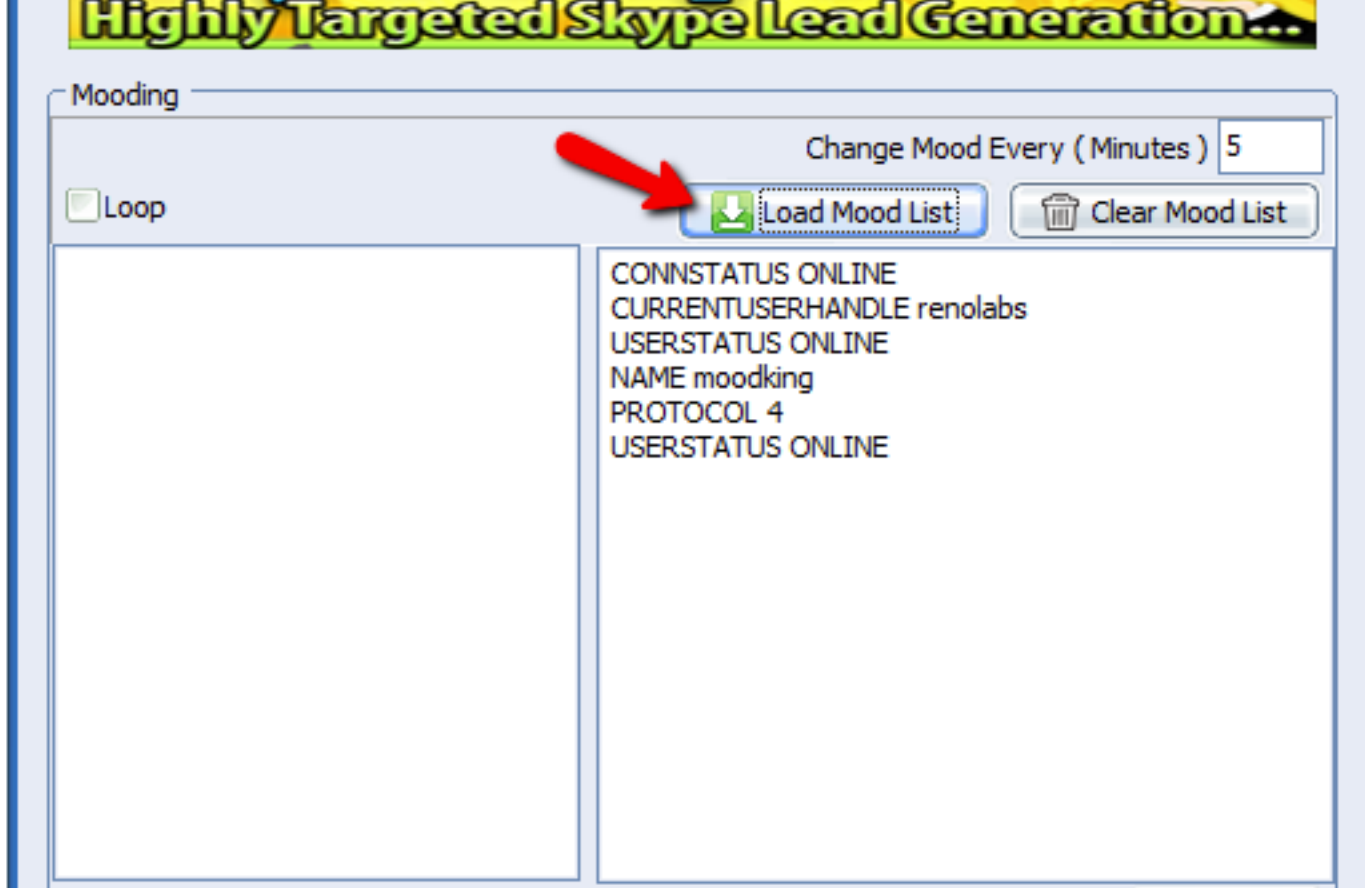

1. Open software - (See more discounted Skype marketing tools!)

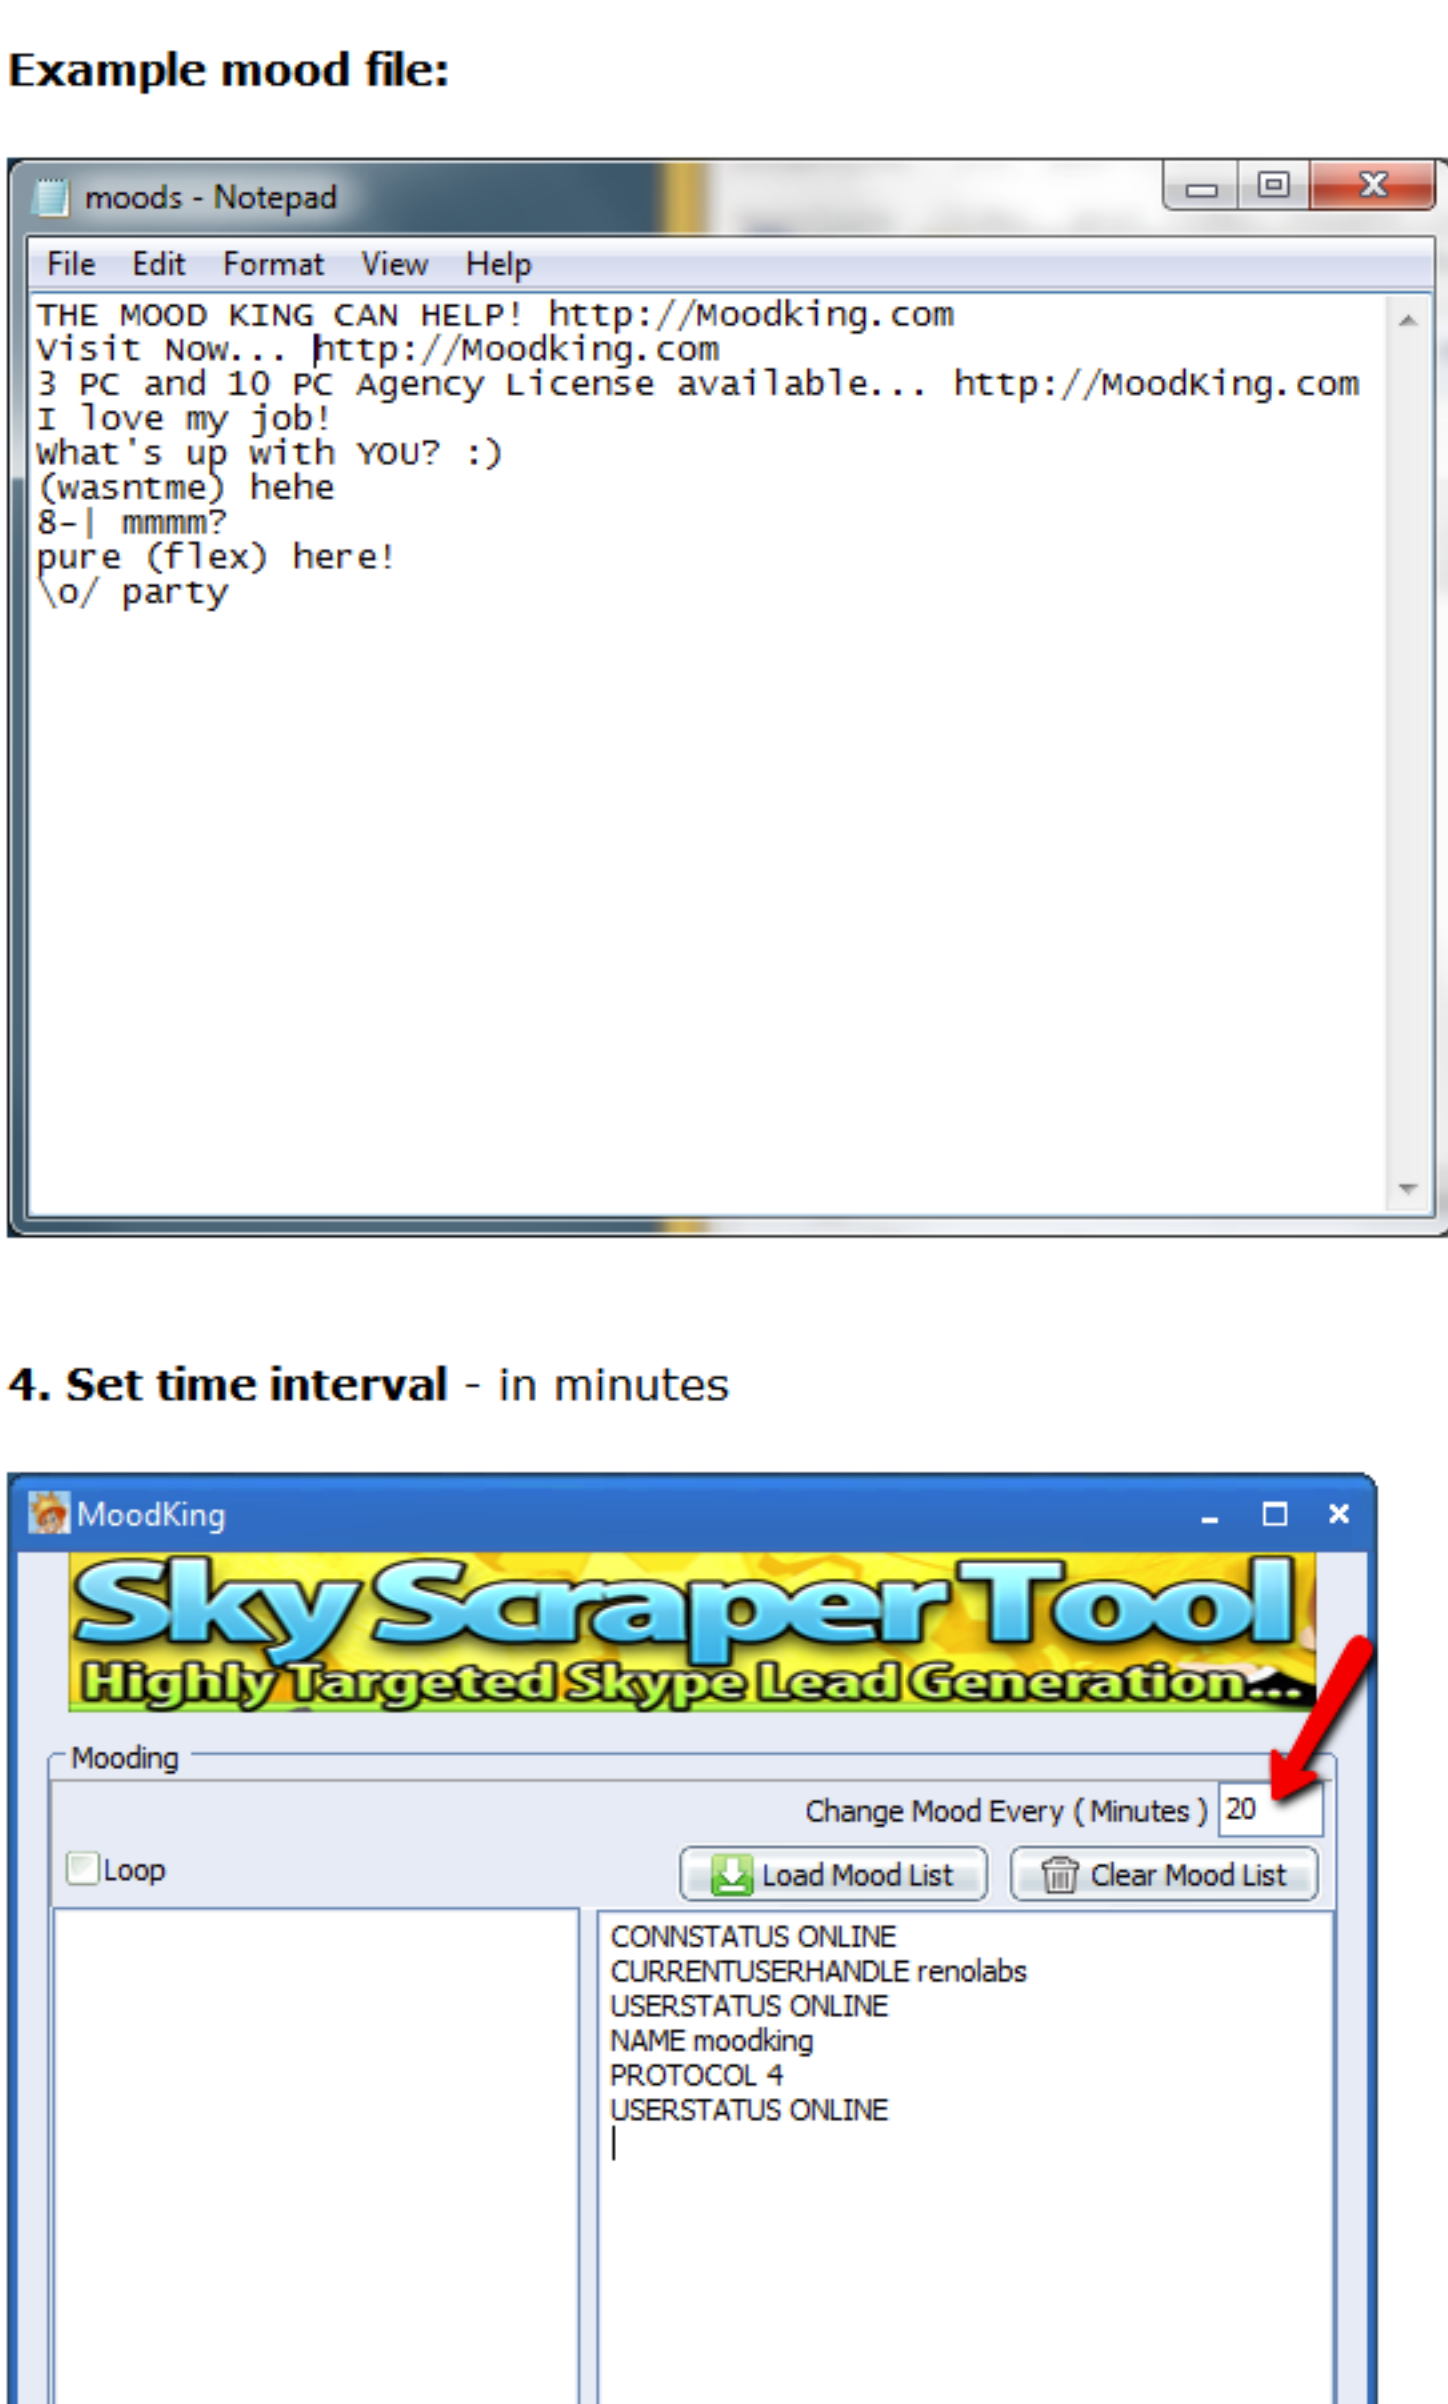

2. Connect With Skype - Allow MoodKing.exe to connect

3. Select mood file - formatted one mood per line in text file

Example mood file:

4. Set time interval - in minutes

5. Hit Start!

Minimize Mood King and Let It Run In The Background!

When you start your PC, start your Mood King software and let it run. If you're always connected to the internet, that's even better. Mood King is working for you 24 hours a day 7 days a week!

Got a product for sale? Open a notepad and write up 10 short status updates(moods), and add your links! This is your first mood file!

Got a new squeeze page setup that you want to test? Create another mood file!

Do you 'bank' clicks with partners? Create a mood file just for this! (make sure that your partners know that you're driving quality traffic via Skype and are ok with it!)

Is there a hot affiliate offer that you're promoting? Create a mood file! You can use short testimonials with your affiliate link - BAM!

Got an upcoming launch or affiliate launch? Create a mood file with the pre-launch content. Perhaps pointing to free reports or videos. Maybe you want to show off your bonus package ahead of time. This is pre-selling 24/7 and when launch day comes you cash in!

Got a hot Facebook group and need more likes? Or a FB group and need more members?

Or YouTube channel you want people to subscribe to?

Create a mood file!

I Think You're Getting The Picture Here...

And when you have several mood files created, you can COMBINE them, and make a MASTER mood file.

This allows you to promote ALL of your offers on an ongoing basis, on autopilot. You just keep adding to the file. (Make sure you don't add items to your Master mood file that will expire. For example, you don't want to be promoting a '5 day only' deal 2 months from now or you're just wasting clicks, and folks might not click next time. Make sure the offers in your Master mood file are evergreen for long term profits!)

Supported HTML (Rich Moods - Displays On Your Profile Only):

```
<br/>
<b></b>
<i></i>
<u></u>
<blink></blink>
<center></center>
<font face="font name" size="font size" color="font color"></font>
<a href="url"></a>
<flag country="flag">country</flag>

example: <flag country="AF">Afghanistan</flag>
```

NOTE: Rich moods do NOT display on the Home screen that all of your contacts see. (This is how Skype itself works). Rich moods ARE viewable when someone clicks on your name.

So for example: If you wanted to put a link in your mood file that everyone will be able to see on the home screen, use plain text moods like:

http://yourlinkhere.com

instead of YourLinkHere.com

Skype Emoticons: (Will Display on Home Screen, AND Your Profile)

Emote: 😊 :-) := (smile)
Emote: ☹️ :- (: (= (sad)
Emote: 😂 :-D :-D :=D (laugh)
Emote: 😎 :-8 :-8 :=8 (cool)
Emote: 😲 :-o :-O :=o (surprised)
