

Announcing the Brand New, 9-Part, Step-by-Step Video Course that Shows You...

Finally, Discover How to Protect Your Digital Goods From Prying Eyes ...Starting Today!

Even with a membership script, your downloadable files are most likely not secured. In the specific video series, I'm going to show you step-by-step, as you watch over my shoulder, how you can secure your digital downloads.

===

According to the HuffingtonPost.com, "A Study Found That Hackers Cost U.S. Economy Up To 500,000 Jobs Each Year."

According to FoxBusiness.com, "Report shows Cyber Crime Costs Global Economy Up to \$500B a Year."

It's a fact that many online businesses are hosting their digital goods in an unsecured members' area.

That means even the downloadable links within your secured members' area could be currently shared with hundreds, or even thousands, of people each and every month.

And as this is going on, you are paying for the extra bandwidth for each and every one of those pirated downloads. So, you could be losing money rapidly, depending on where you host your files.

So, the question remains is how do you monitor or know if people are pirating your digital goods?

Because the fact of the matter is, most people are not aware of what is happening out on the Internet.

Then of course, the next step is how do you secure your hard work and digital goods from prying eyes - so that this does not happen to you?

How do you lockdown your precious digital goods that you worked so hard to create?

And, how do you do all of this without spending tons of money on membership scripts?

Simple! Oftentimes, you can easily do this by using your web hosting panel.

But, where many people fall short is by not understanding how to use it correctly. In the first part of this video series, we'll be using Cpanel which is the most widely used hosting panel.

In the second half of the video series, you're going to learn other ways to secure your videos and PDF files; if you've done everything in your power, what you can do as a last resort?

Introducing digital downloads security

Video #1: Introduction to Digital Downloads Lockdown

In this specific video, you will be given a quick overview of the system itself as well as the tools that you are going to need to implement what you will learn in this video course.

Video #2: Understanding How People Pirate Goods

Now, before we jump right into showing you how to secure your digital downloads, the first thing you need to understand is how the majority of people pirate goods. Then, we will give you some ideas on how you can detect what might happen and how you can protect yourself.

Video #3: Get Alerted When People Share Your Goods

While this is not a 100% guarantee, most of the time this works. Thus, I am going to show you a free trick that will allow you to be alerted immediately when somebody shares your digital goods online.

Video #4: Locking Down Your Files within Your Members Area

Now that you have learned the fundamentals in the previous videos, it's time to jump right in and begin to lock down your files. So in the specific video, I'm going to show you exactly that as well as examples of what people might do so you can protect yourself. Keep in mind that this only works if you have a primary layer of protection such as a membership script securing your download page.

Video #5: Video Protection Part 1 - What Not To Do

There are many do's and don'ts when it comes to video protection. Now before I jump

into what you should do, I want to cover a few things that many people tend to do that are not secure at all. These are real life examples I have seen and even done myself. I'll also give you a glimpse into what other people do when it comes to stealing your videos. Sometimes, you can't prevent it 100%, but there are some last resort actions you can take.

#### Video #6: Video Protection Part 2 - What To Do

Now that we have covered what you should not do in video five, it's time to show you what you need to do to protect your videos right now.

#### Video #7: Prevent People From Finding It On Google

Unfortunately, there is a sneaky trick that allows you to use Google to find people's unprotected digital downloads. So in this specific video, I'm going to show you how this trick works so that you can figure out if your site is vulnerable. And of course, I will show you how to protect yourself.

#### Video #8: PDF Security

In this specific video, we are going to cover PDF security. PDF files are easy to create as a digital download, but it is also easy to pirates as well. So, there is one specific trick you can use to secure your PDF files.

#### Video #9: "Last Resort" Piracy Protection

If you have done everything in your power from the videos above to protect your digital downloads however you no longer have access to the files and they are being downloaded elsewhere, there is something that you can do as a last resort that still works really well. In the specific video, I am going to cover that.

Go ahead and watch this video course. Grab this video course and start learning how to secure your digital goods right away.
